# Synkron Via CMS

Features

Audit Trail

Keep track of editorial changes

Working with extensive websites with many editors can make the management of changes hard to handle. By using Synkron Via Audit Trail, this challenge is met and dealt with, because the module registers every editorial change made on the website and also the user who has made the change.

Content Integrator

Easy sharing of content across platforms - create a shared information platform

Sharing data across platforms is one of the criterions of success if you want a successful website. In many cases the data in question will be based on a specific language or be placed on a specific server. Synkron Via Content Integrator can be used to create the necessary integration between all kinds of systems that are able to deliver output through HTML. This integration means that it is possible to use the content from existing systems or develop new functionality that fulfills your needs.

Developer Framework
EURO 8.000

With Developer Framework your business needs are always met by your web solution

A web solution is supposed to make it easier to do the daily tasks in the organization and offer better service to clients, partners, members or private citizens. A web solution that supports the realization of these demands, requires the possibility of developing specific and flexible functionality and integration to the solution. Synkron Via Developer Framework makes it possible for developers to create new componentsand integrations to the solution so it always matches the requirements of the business. Synkron Via Developer Framework is based on one of the most widespread web technologies: .NET 2.0, SOAP, XML and XSLT.

Documents

A world of new possibilities for inserting content on websites

The concept Synkron Via Documents makes it possible to create a frame for the content structure on your website and to create specific rules for publication. Synkron Via Documents is especially suited for creating a fixed structure for the content in your documents. Synkron Via Documents contain:
» Document Lists
» Document Templates
» Document Viewer

Document List

Automate tasks by creating a suitable information flow

Synkron Via Document List makes it easier to publish information the right places on your website. Synkron Via Document List enables an editor to create rules that determine where, when and how a document is published. This automation can help save both time and resources.

Features

Document Templates

Create regulations for the structure of content

Synkron Via Document Templates enables the editor in charge to create specific rules for how content is published on specific pages on the website. It is possible for the editor in charge to control how headings, text and images are displayed on the website and in what order. It simplifies the process of publishing content on the website by automatically styling the content based on rules integrated in the solution.

Editions (Languages)

Maintain control with different language versions of the same document

Many organizations and companies are in need of communicating in several languages through their website. With Synkron Via Editions this is very simple. The same document can exist in an unlimited number of language editions which simplifies the management of content on the website.

eRez ImageServer

Create an unlimited number of variations from a single image file

eRez Imageserver makes your images dynamic and makes it possible to share, convert, file, and publish them on your web solution through a easy-to-use web-based user interface. eRez Imageserver can easily be integrated with Synkron Via CMS, since the system contains Imageserver Connector.

Forms

Synkron Via Forms creates a unique of opportunity for gatering information from users

Synkron Via Forms makes it easy to enter a dialogue with users of your website. Forms enables easy setup of forms for ordering, or schemes that can be used as fx electronical time sheets. Forms are also suited for registration at seminars or surveys on the website. The advantage of using forms is that you can ensure that you are given certain information.

Newsletter

Manage all your newsletters, and test if there are being read!

Synkron Via Newsletter targets the webcommunication through recipient-based newsletters, where users tell you their interests. Newletter lets you create a relevant and interesting channel for digital communication, where the built-in tracking enables you to test behaviour on several levels.
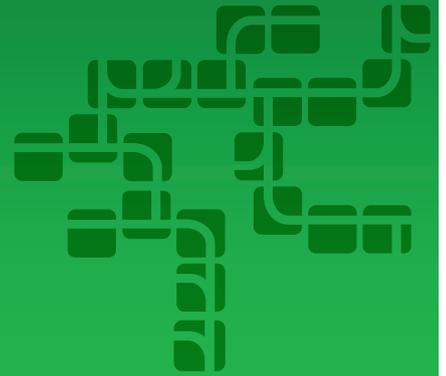

Search

Eliminate searching with fruitless efforts

As the amount of information on websites increases, it gets more difficult for users to find the relevant information. With Synkron Via Search you can provide relevant search-options for users, because content are automatically being indexed. Furthermore you can setup special search-fields that searches the entire or parts of the index

Features

Smart Lists
EURO 2.650

Create content lists automatically and ensure a good linkage on your website

A large website is easier to navigate if there is a good linkage between different sections and topics, which can include lists of the latest updates or an directory of the similar or relevant topics. Synkron Via Smart Lists automatically makes these lists from different criterias as topic, metadata or time of editing.

Versions

Manage the history of your website automatically

Synkron Via Versions fully automates the process of managing versions: Each time a page, document, or an other element are updated, the older version is archived and provide with information about the last editor and when the version where saved. Versions enables you to track older versions, if this proves to be a necessity.
